

hendercare

Your skilled paediatric therapy team.

**This program is delivered by
qualified Speech Pathologists and
Occupational Therapists.**

What is speech pathology?

By assessing and supporting children with functional communication, speech pathologists help children use language to participate in the classroom and improve social communication.

What is occupational therapy?

Occupational therapy enables young people to maintain and improve their self-care, toileting, social, emotional and motor skills across their environments.

Early Childhood Screening Program

The early years of a child's life provide an important period in which the support network for the child can best learn how to support their development.

Understanding the importance of this period and the beneficial results of Early Childhood Early Intervention (ECEI) HenderCare offers an Early Childhood Screening Program. In this innovative program, Allied Health professionals attend your school or kindergarten. Through short, non-intrusive assessments, we provide qualified information and reporting, helping to identify those children who may benefit from further ECEI services.

Whilst not diagnostic in nature, this program provides parents and educators with critical information that can help inform decisions around the best ways to support the child as they grow.

To find out more, speak with our Allied Health Manager, Zoe Morris on 61 194 828 or email hello@hendercare.com.au.

Screening Package Options

We offer two different screening packages to suit the needs of both the school and the school community. Please refer to the associated costs in the table on the lower half of this page and if you require a tailored package please call our team on 1300 764 433 to discuss.

Standard	40-minute allied health screen + 20 minutes reporting. FREE 60-minute teacher collaboration.
Comprehensive	60-minute allied health screen + 30 minutes reporting. FREE 90-minute teacher collaboration and training.
